

Commission: Environmental

Topic: The creation of an international effort to deter the negative attributions of climate change regarding the ocean

Main Submitter: Kuwait International Law Society/ Kuwait University

Keeping in mind with regret the fact that the ocean has absorbed about 90 percent of the heat generated by rising emissions¹.

Deeply disturbed by the fact that aquatic life and other natural habitats are rapidly disappearing, negatively affecting the marine ecosystem².

Guided by the participation of the global community in educating themselves and in solving the imminent issue of climate change.

Declaring our appreciation towards countries that have already contributed.

1. Raising awareness on a national scale about the current condition of the ocean that was brought on by climate change:
 - Advertisement campaigns.
 - People involved in polluting the ocean or distributing aquatic life will face consequences such as but not limited to:
 - i. Fines,
 - ii. Jail time,
 - iii. Eco-Friendly community service,

2. Ensuring the inclusion of international agreements within the internal legislation of the country:

¹ <https://www.un.org/en/climatechange/science/climate-issues/ocean-impacts>

² <https://news.uga.edu/fish-enormous-nutrient-impacts-121112/>

- Calls upon the parliament to insure that the legislations correspond to said agreements, and correct monitoring from the executive government:
 - a. Correct implementation of checks and balances
 - b. Harsher punishments on those who disregard said legislations
 - c. Establish an organization that is dedicated to the preservation of aquatic life

3. Legitimize non-government organizations (ngo's) and give them observer status with the UN Environment Assembly after accreditation by ECOSOC in such ways as:

- Greenpeace.
- Earth Institute Center for Environmental Research and Conservation.
- Earth Island Institute.
- Earth Justice.
- Environmental Defense Fund.
- Fauna and Flora International.
- Nature Friends International.
- Global Footprint Network.³

4. Encourages the population to use other eco-friendly methods of transportation that limit the CO2 emissions such as but not limited to:

- Artefact. Francisco Martinez.
- Juliet.
- White Rabbit.
- Luminosity.
- Black Pearl.
- Yersin.
- Geist.
- Bravo Eugenia.⁴

⁴ <https://www.boatinternational.com/yachts/yacht-design/eco-focused-superyachts>

5. Proclaims the creation of pit stops that are used for dumping fuel instead of dumping in the middle of the ocean:

- Said stops will limit the surface area of damage
- Stops are dedicated to gather as much fuel, filter, recycle and/or clean it up in an eco-friendly way
